DURING THE LESSONS, I LEARNED THE FUNDAMENTALS OF FLUTTER AND I MANAGED TO MAKE MY FIRST APP WITH THEM.

main.dart

```
      return MaterialApp(
        title: 'Flutter Demo',
        theme: ThemeData(
          // This is the theme of your application.
          //
          // Try running your application with "flutter run". You
          // application has a blue toolbar. Then, without quitti
          // changing the primarySwatch below to Colors.green and
          // "hot reload" (press "r" in the console where you ran
          // or simply save your changes to "hot reload" in a Flu
          // Notice that the counter didn't reset back to zero; t
          // is not restarted.
          primarySwatch: Colors.blue,
        ), // ThemeData
        home: MyHomePage(title: 'Flutter Demo Home Page'),
      ); // MaterialApp
    }
  }

  class MyHomePage extends StatefulWidget {
    MyHomePage({Key key, this.title}) : super(key: key);

    // This widget is the home page of your application. It is st
    // that it has a State object (defined below) that contains f
    // how it looks.

    // This class is the configuration for the state. It holds th
